

COGNITIVE BEHAVIORAL THERAPY (CBT) – SESSION 10

New Case: Rohan (26 y/o) – Contamination OCD + Checking

Highly Detailed – Realistic Style

SESSION INFORMATION

Client:	Rohan (26 years, Male, Software Engineer, Bangalore)	Therapist:	Dr. A.
Session #:	10 of 18–20	Focus:	Continuing ERP + Reviewing Progress

PRE-SESSION THERAPIST NOTES

Client arrived looking more confident and engaged than previous sessions. He practiced the public toilet door handle exposure at home 2 times with good habituation. He reported that anxiety is decreasing faster with repeated practice and that he is delaying other compulsions more consistently. He continues to use labeling effectively. Today's plan: Review home ERP practice in detail, continue ERP with the next hierarchy item (touching money and then eating without washing immediately), reinforce progress and coping skills, and assign new homework. Maintain supportive and encouraging approach.

SESSION START – HOMEWORK REVIEW

Therapist: Good morning, Rohan. How has your week been? I'm curious to hear how the public toilet door handle practice at home went.

Client: (speaking with more confidence) It went quite well. I practiced it two times. The first time, anxiety went up to around 60–65 and took about 12–13 minutes to come down significantly. By the second time, it only went up to around 45–50 and came down faster — in about 8–9 minutes. I was able to delay washing for much longer each time. I also noticed that on days when I used labeling quickly, other contamination urges felt more manageable too. I still washed more than I ideally want to, but I'm delaying significantly more often now.

Therapist: That's excellent continued progress. You're clearly experiencing faster habituation with repeated practice — the anxiety is rising less and coming down quicker. You're also generalizing the labeling skill effectively. How are you feeling about these changes?

Client: I feel more hopeful and a bit proud. Each practice is getting a bit easier, and I'm seeing that I can handle more than I thought. I'm still nervous about some of the higher items on the list, but I think I can keep going.

CONTINUING ERP – NEXT HIERARCHY ITEM

Therapist: Since you're making consistent progress, I'd like to suggest we move to the next item on your hierarchy today in session — touching money/notes and then eating something without washing immediately. We can practice it here first. How does that sound?

Client: I think I can try that. It feels scarier because it involves eating afterward, but I'm more confident after the last few practices.

Therapist: That's completely understandable. Let's do it step by step. I'll ask you to touch these notes (representing money). Then we'll stay with whatever thoughts and anxiety come up, using labeling and breathing. We'll aim to delay washing and then eat something small without washing immediately. Ready when you are.

(In-session exposure conducted: Rohan touched the notes. Initial anxiety rose to around 70/100 with strong urge to wash. He practiced labeling and breathing. After 15 minutes, anxiety decreased to around 22/100. He then ate a small biscuit without washing. Post-exposure processing done.)

Therapist: How was that experience for you?

Client: It was harder than the toilet door handle one, but I could handle it. The anxiety went up more, especially because I knew I would eat afterward without washing. But it still came down after some time. I feel tired now, but also relieved and a bit proud that I was able to do it.

Therapist: That's a significant step forward. You tolerated higher anxiety and still experienced strong habituation, even with the added layer of eating without washing. This builds real confidence that you can handle more difficult real-life situations. How are you feeling about practicing this one at home?

Client: I think I can try it 1–2 times this week. I'm still nervous, but today's practice helped a lot.

HOMEWORK ASSIGNMENT

Therapist: For this week:

1. Practice touching money/notes and then eating something without washing immediately (1–2 times)
2. Continue practicing the public toilet door handle exposure at home
3. Continue labeling and monitoring

Client: I'll try the money one. I feel more prepared after today's session.

Therapist: Excellent. We'll review how it went next session.

SESSION SUMMARY & FEEDBACK

Therapist: Today we reviewed your strong progress at home, did the next hierarchy item in session (touching money and eating), and saw excellent habituation. How are you feeling about today's session?

Client: I feel more confident than before. Each exposure is getting a bit easier, and I'm seeing that I can handle more than I thought. I'm still scared of some higher items, but I think I can keep going.

Therapist: That's wonderful to hear. Any questions before we finish?

Client: Not really.

POST-SESSION THERAPIST NOTES

- Client showed continued strong progress in ERP. Successfully completed sixth hierarchy item in session with excellent habituation.
- Client reported increased confidence and faster habituation with repeated practice.
- Motivation and engagement remain high. Client is gradually building tolerance to higher anxiety levels.
- Next session: Review home ERP practice, continue ERP with next hierarchy item if ready, reinforce coping skills and self-compassion, address any emerging difficulties.
